Another month has come and passed and we are now in the middle of our summer. The month of June was a busy month again for us. We once again responded to more calls for service than we have in the same time period for the last 2 years. This is a trend that I think is going to continue to happen. Now that there are no more restrictions and people can move about. More people in the area along with people not wanting to or able to get normal health problems checked has put a increasing strain on the rescue service.

With the night Pre-Diem we are keeping the response time down to about a 1 ½ minute from time of tone to out the door, which is really good. Prior to having the Pre-Diem's it was about 9-10 minute average. The next problem that we are starting to have is second rescue calls that are coming in when we are already on a first one. We are have first responders go but with no second rescue we are forced to wait for a outside agency to come in a transport patient for us, or if we are lucky our rescue is just clearing the hospital. This is not just a us issue this is cross the state and the nation. There were a couple of times this past month when other EMS services were to busy and not able to send a rescue to us to help. If it was for first responders going the wait would have been great.

I would also like to say that most, close to 90% of the EMS people that work are also dual certified as firefighters. We are find that the 2 people that are on duty are much need to help the fire department respond to calls. This is even more so during the week day and 95% of the department is working their full time jobs and can not leave to go on fire calls. Paid staffing even though it can be costly is the only way to have a guaranteed response along with having the equipment to respond.

I would like to take a minute and talk how the importance of staying hydrated during this hot time of year for us. It is important to stay well hydrated and if you start to feel like you are becoming dehydrated they you already are. Don't guzzle water even though that is what most of what us would do nice sips of water, get yourself or the person to some shade and if they continue to worsen call 911. The very young and the elderly are the one's that are easily dehydrated.
